iPhone Mail Configuration

Domain Email · https://websbyamy.com/support/docs/iphone-mail-configuration/

Your email is POP/IMAP so you can add send/receive through any device (Android or iPhone).

Below is a short video about how to set up your iPhone with domain mail. In addition, I've included the basic settings you need to know.

Video Tutorial

Basic Settings:

Below are basic settings, you would put your specific email and password as well as the Host Name or Incoming/Outgoing server would be '*yourdomain.com*'.
